Converted all electricity at Head Office and Technical Center
to "renewable energy electricity"

Up to now, as a member of the All Toyota Company, we have been working on the shift to "renewable energy power," which means that 100% of the electricity we use is derived from renewable energy sources (hereafter referred to as "renewable energy power"). By promoting in-house consumption of solar-generated electricity and purchasing renewable electricity from power companies, we have switched to renewable electricity for our head office in December 2023 and for the Technical Center in April 2024.

We will continue to promote the use of "renewable electricity" at other sites and aim to achieve this goal for all company electricity by 2030.
